

■ Project Profile:
Residential Care Home
Malvern

- We were asked by our Client to assist with the refurbishment of their residential care home in West Malvern, including the maximisation of the use of the property to increase the number of bed spaces available and to bring the existing bed spaces and other facilities up to current registration standards.

The home consisted of a converted Edwardian Property situated on the west side of the Malvern Hills in an area of outstanding natural beauty imposing certain restrictions on the ability to develop the site.

Following a careful survey of the property it was found that a number of additional bedrooms and other facilities could be created by imaginative use of lower ground floor areas with direct access to the grounds.

The size of a number of the smaller bedrooms was increased by the creative addition of a two storey timber framed oriel window which created the necessary additional floor space together with much improved lighting to the rooms concerned and taking advantage of the dramatic views across Herefordshire.
